

## PTC SMD Switching Thermistor

### Applications

- Over temperature sensing
- Temperature compensation

### Features

- Five sided terminations
- Solid state ceramic composition

**0805 & 1206**

### SPECIFICATION TABLE

Part Number	$\Omega$ @ 25°C +/- 30%	Switch Temp. +/- 5 °C	Reference Dimensions (inches)			
			A	B	C	D
WSM0805DC501N	500	100	0.080" (2.03mm)	0.050" (1.27mm)	0.050" (1.27mm)	0.020" (0.51mm)
WSM0805DC102N	1000	100	0.080" (2.03mm)	0.050" (1.27mm)	0.050" (1.27mm)	0.020" (0.51mm)
WSM0805DC202N	2000	100	0.080" (2.03mm)	0.050" (1.27mm)	0.050" (1.27mm)	0.020" (0.51mm)
WSM1206DC501N	500	100	0.120" (3.05mm)	0.060" (1.52mm)	0.060" (1.52mm)	0.020" (0.51mm)
WSM1206DC102N	1000	100	0.120" (3.05mm)	0.060" (1.52mm)	0.060" (1.52mm)	0.020" (0.51mm)
WSM1206DC202N	2000	100	0.120" (3.05mm)	0.060" (1.52mm)	0.060" (1.52mm)	0.020" (0.51mm)

## Options

- Tape and Reeling
- Special Resistance Values

## Terminology

**Base Resistance** - The resistance value of a thermistor at a specified temperature with negligible electrical power to avoid self heating. Usually base resistance will be defined at 25 C.

**Switch Temperature** - The temperature when the resistance of the PTC thermistor reaches two (2) times the base resistance, sometimes referred to as curie point or transition

**RESISTANCE OPERATING CHARACTERISTICS**

1. Locate the place on the curve where  $I_{op}/I_{max}$  intersects the multiplication factor (MF).
2. Multiply the multiplication factor (MF) by  $R@I_{max}$  for the specific thermistor being used. The resulting value will be equal to the operating resistance ( $R_{op}$ ). The equation is:

$$R_{op} = (R@I_{max}) \times (MF)$$

\* $I_{op}$  = operating current

PTC Thermistors can be formulated to have switching temperatures as low as zero (0) C to well over 200 C. Figure 2 illustrates typical 60, 80, 100, and 120 C switching temperature curves.
